Footnotes: Vegetables

² Due to the increasing number of illnesses associated with consumption of raw sprouts, the Food and Drug Administration has advised all consumers – especially children, pregnant women, the elderly, and persons with weakened immune systems – to not eat raw sprouts as a way to reduce the risk of foodborne illness. Therefore, raw sprout data served in the raw state has been intentionally omitted.

³ Dehydrated pinto beans are whole dry beans that have been cooked and then dehydrated.

⁴ Liquid from canned beans used to puree beans no additional liquid added.

⁵ Pureed foods such as fruits and vegetables may contribute to meal pattern requirements, provided that the dish that contains the pureed food also provides an adequate amount of recognizable, creditable fruits or vegetables. Additional information regarding crediting pureed foods is available in Memo SP 10-2012 v.9.

⁶ For the purposes of the NSLP, the “Additional Vegetables” requirement will be used for any vegetable mixture in which the ratio of the vegetable mixture is not clearly labeled or reported. Further documentation from the vendor would be necessary to determine crediting for any subgroup such as dark green, red/orange, and beans/peas (legumes) vegetable subgroups.

⁷ Shaped, shredded potatoes available under brand names such as “Tater Tots” or “Tater Gems.”

⁸ For salsa products that contain all vegetable ingredients plus a minor amount of spices or flavorings, one hundred percent of the product may be used to meet the volume vegetable/fruit requirement for meal pattern requirements. When products contain non-vegetable ingredients like gums, starches or stabilizers, water or vinegar, only that portion of the product that is a vegetable ingredient may be counted towards the volume requirement.
